Compute Match — Customer Guide (Find, Request and Track GPU Clusters)

This guide is for customers (also called Offtakers): organizations that want to reserve GPU capacity from NVIDIA Cloud Providers (NCPs).

Customer menu

Click your name in the top-right to open the account menu:

Menu item	Route
Request a Cluster	`/customer` (redirects to Find a Cluster to Reserve)
My requests	`/customer/reservations`
Logout	—

The header also has **Page Help** (`?`), **User Manual** (book icon), **Share Feedback**, and the **What's New** bell.

Step 1 — Find a Cluster to Reserve

Route: `/customer/reservation-request/available-clusters`. This is the customer landing page. It shows GPU clusters from all NCPs on an interactive world map plus capacity cards.

Filters

Filter	What it does
Search	Free text across platform, region, country, GPU model
Platform	GPU model (for example H100, B200). Select this first: Tenure and Earliest Start Date unlock only after a platform is chosen
Geographical Region	Broad region such as North America, Europe, Asia Pacific
Country	Cascades from Geographical Region
No. of GPUs	Minimum available GPUs
Tenure	Reservation length band: `0–1`, `1–2`, `2–3`, `3–4`, `4–5`, `5–6`, `6+` years. Requires Platform
Earliest Start Date	Must be after today

Each card shows City, GPU count, and **Earliest Available Date**. Cards are labelled **Current** (available capacity) or **Future** (capacity starting later). An amber note means the cluster already has pending requests. If the platform admins set a pending-request cap, oversubscribed clusters are hidden.

Selecting clusters

1. Narrow the list with filters.
2. Click a map bubble or a card.
3. Optional: turn on **Send request to multiple NCP's** (needs the `send_request_multiple_provider` scope). Checkboxes appear; you can select up to **3** clusters (configurable). Selecting more shows a warning.
4. Click **Request a Cluster** to open the reservation form with your selection pre-filled.

Changing the Platform while cards are selected asks you to confirm clearing the selection.

Step 2 — Fill the reservation form

The form opens in a modal with three sections.

Cluster Details

- Pre-filled and read-only when you picked a cluster.
- With several clusters, they are shown as Option 1, Option 2… separated by “or”, with an amber banner: these are **alternatives**, and your request will be matched with **one** cluster based on NCP availability.
- For custom requests, GPU Model and Geographical Region are required and Country is optional.

Customer Details

Field	Required	Rules
Organization Name	Yes	Dropdown with suggestions, or “Other” with a new unique name
Organization URL	No	Valid URL
Contact Email	No	Valid email, max 250 characters
Purpose	No	Max 1,000 characters
Terms & Conditions	Yes	Pre-accepted on submit

GPU Reservation Period

Field	Required	Rules
GPUs	Yes	Whole number of at least 1
Preferred start date / Earliest Start Date	Yes	After today
Duration (months)	When not using tenure	At least 1 month
Tenure	When you came in with a tenure filter	One of the tenure bands

If you ask for more GPUs or an earlier date than the cluster shows, a yellow warning appears; you can still submit and negotiate with the NCP.

Form buttons

- **Submit reservation request** validates and submits (`POST /api/v1/reservation-request`). On success you see “Successfully created Reservation Request” and land on the request detail page.
- **Clear Form** resets fields but keeps the cluster pre-fill.
- Clicking outside or pressing Esc after typing asks why you are leaving, or asks you to **Keep editing** or **Discard**. The × and **Cancel** buttons close immediately.

Custom requests (no matching cluster)

If nothing fits, click **Submit a custom request** (banner under the filters) or **Submit Custom Request** (empty state). Your current filters are carried over as hints. A custom request is not sent to a specific NCP; NVIDIA Platform Admins broker it manually and move it through:

Open → **In Review** → **Matched** or **Unserviceable**. You can cancel it while it is Open or In Review. Custom requests never expire. You get an email at each step.

Step 3 — Track requests in My Requests

Route: `/customer/reservations`.

- Columns: Request ID (shown as “REQ-1 - Status”), Customer, Contact Email, Platform, Geographical Region, Country, Requested GPUs, Total GPUs, Requested Date, Start/End Date, Duration (Hours), Status.
- Multi-NCP requests show as a grouped row with one child row per NCP.
- The date under the status chip is when it moved to In Process, Contracted, Rejected, Expired or Cancelled. Rejected rows have an info icon with the NCP’s remarks.
- Filters: Status, Hosting Provider (hidden for multi-provider), Platform, Geographical Region, Country, Sort by request date, **Clear All**.
- With no requests you see **No requests found** with a button to create one.

Step 4 — Reservation detail

Route: `/customer/reservations/{reservationId}`.

- A headline states the status, for example “Your Reservation request is awaiting NCP acceptance” or “Contract Complete!”, with the expiry date when relevant.

- **Reservation Summary**: organization, contact email, period, GPU count, platform, region, country, rejection remarks, terms acceptance.
- **Proposal History**: every proposal (yours and NCP counteroffers), grouped by region when several NCPs are involved.
- **Cancel**: available while Awaiting NCP Acceptance, Awaiting Provider/Customer Approval, In Process or Expired. Confirm in the modal; you may give a reason. All involved NCPs are notified by email.
- You cannot accept or reject NCP proposals on this page; the NCP confirms the contract.

What happens after you submit

1. You get a “request received” email.
2. Each selected NCP gets a magic-link email and has 7 days to accept.
3. When an NCP accepts, the request goes **In Process** and you get an introduction email so you can negotiate directly. The contract window is 45 days.
4. When an NCP clicks **Confirm Contract**, your request becomes **Contracted**; other NCPs on the same request are cancelled as superseded.
5. If every NCP rejects, the request is **Rejected**. If all deadlines pass, it is **Expired** and you get one consolidated expiry email.

Feedback

After creating a request you may see “How was the Request a Cluster experience?” with 1-5 stars and **Submit Feedback**. When cancelling or leaving the marketplace you may be asked why. You can also click **Share Feedback** in the header at any time.
